Many design options achieved by one set of material

Design principle&specification of square extrusion

(A)Design principle of square extrusion

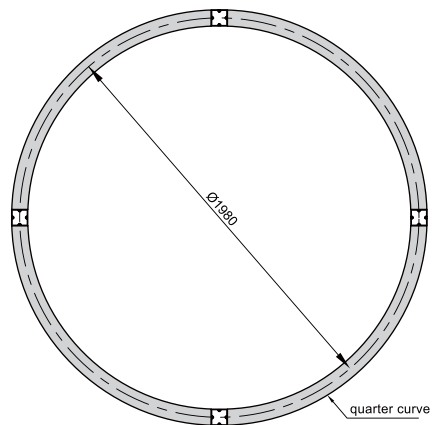

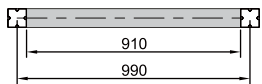

It's extended from the standard system. With this principle we can mutual-use the standard system and design system, highly improving the resuability.

(B)Design specification of square extrusion

It's the same with the standard system. This makes sure of the consistency in the design of square extrusion.

(C)Because of adopting the standard size, Lingtong system booth can be assembled into different designs.

Two options:

- 1 Added some materials to the different design based on the small booth
- 2 Same materials, different combination

Sample 1 added some materials to the different design

Material A: 3X3

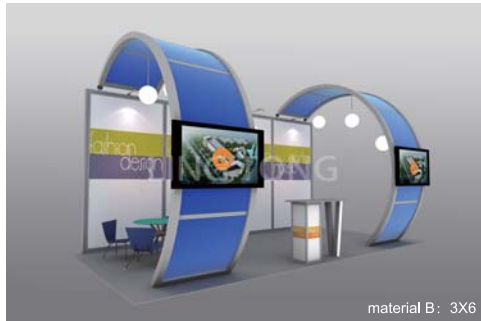

Material B: 6X6

Many design options achieved by one set of material

Sample 2 Added some materials to the different design

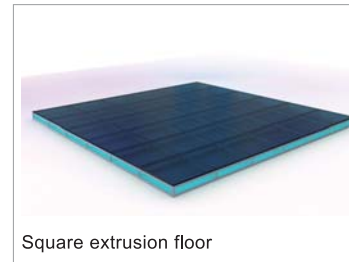

Sample 3 Same materials, different combination

Units modularization

LH truss floor

Square extrusion floor

Slope floor

Adjustable floor
